STRENGTHS

- The great experience of the French brand in MTB benefits this new profile that completes the famous and very versatile Touareg
- The design of the studs has been studied to obtain the most traction on soft ground
- This large volume of the tread allows, among others, to optimize grip both on the flat and in curves and offers excellent braking performance
- All while maintaining a nice rolling center surface for the road stretches before you hit the trails.

IN PRACTICE

Due to its adventurous DNA, this tire's greatest asset is its Tubeless Ready construction, which optimizes grip and comfort at low pressure. In terms of reliability, nothing to fear from uneven terrain thanks to the integral Hardskin Hutchinson reinforcement. Weight is contained at 490g in 700x40. While the more massive 700x45 weighs 580g.

ADVICE FROM A PRO:

Ibai Fradejas - HUTCHINSON AMBASSADOR

"Its large volume of grip allows, among other things, to optimize grip both flat and in curves and offers excellent braking performance. All while maintaining a pleasant rolling central surface for road segments between two trails"

GRAVEL

CONCEPTS

TUBETYPE

DESCRIPTION

- Tubetype tire.

USE

- Competition and training

TUBELESS READY

DESCRIPTION

- Tubeless tire that require Hutchinson Protect'Air Max latex sealant to be airtight.

BENEFITS

- Safety: No tube to pinch-flat or bursts.
- Performance: Improved yield thanks to a better tire deformation. Greater lightness.
- Confort: Without a tube, lower tire pressure can be used without fear of a pinch-flat
- Particularly effective on challenging terrains.

USE

- Racing and training

HARDSKIN

Hardskin®, Textile grid reinforcement from bead to bead on the sidewalls and under the tread.

This technology is highly efficient against cuts, tears, holes and big impacts.

The Hardskin® is the essential partner for all riders seeking to avoid troubles.

REINFORCED+

Economical textile reinforcement from bead to bead that protects the sidewalls and the tread.
